

CreatorOps Roadmap

Premium planning for creators: Library → Smart Mix → Sequence → Planner → Captions → Export. Demo-first launch, then monetization, then expansion.

Algorithm-first

Explainable decisions

Export-first output

Premium motion UX

Light and Dark themes

Audience: community • investors • early users

Last updated: 17 Feb 2026

Demo → Monetization → Expansion

We ship an investor-ready demo first. Then we prove value with a Pro plan. Then we expand formats and workflows.

Now (Demo-ready)

Shipping

- Smart Mix algorithm v1 with guardrails and short reasons per mix
- Upload up to 12 photos per session (max 5MB each)
- Export pack: captions, hashtags, week plan, README (export-first)
- Marketing waitlist flow and interaction polish (Awards feel)
- SEO pass: meta tags, OG images, sitemap, robots, canonical

Next (Pro plan)

Monetize

- Pricing value: 9 vs 18 grid toggle (Pro unlock)
- Sequence shows Week 1 and Week 2 for 18 mode
- Session persistence and saved libraries (local first)
- AI captions integration (backend) as an optional Pro feature
- Team and agency foundations: multiple brands and sets

Later (Expansion)

Scale

- Reels mode (export-first), then scheduling when backend exists
- Bio Builder: profile header assistant with a live preview
- Quick Photo Editor: consistency toolkit with presets and crops
- Publishing via Instagram Graph API (requires backend and OAuth)
- Collaboration and templates marketplace (longer term)

Release principles

Guardrails prevent repeats

Performance-first

No integrations required for demo

Explainable results (reasons)

Module Specs

Four expansion modules that extend the core loop. Each is scoped to stay demo-friendly and premium.

Bio Builder (Profile Header) Later

- Goal: help users craft a professional profile header fast
- UX: Instagram-like preview, copy buttons, presets by niche
- MVP: 3 to 6 variants, tone selector, character counts
- Definition of Done: export to text, works offline for demo
- Risk: scope creep into full website builder

Pricing Value: 9 vs 18 Grid Next

- Goal: clear Pro value and deeper planning
- UX: toggle 9 and 18; Sequence shows Week 1 and Week 2
- MVP: stable layout generator for 18; export supports both
- Definition of Done: gating, no duplicates across weeks
- Risk: algorithm complexity and performance

Reels Expansion Later

- Goal: expand planning to short-form video workflows
- MVP: reels library, sequence, captions, export pack
- Definition of Done: export-first (no auto publish)
- Risk: large file sizes and preview performance

Photo Editor: Quick Consistency To Later

- Goal: consistent feed look with minimal tools
- MVP: crop presets, exposure, temp, grain, vignette
- Batch presets, non-destructive, revert anytime
- Definition of Done: edits flow into Smart Mix and Export
- Risk: performance and engineering time

Note: auto-publishing requires Instagram Graph API plus a backend for OAuth, token storage, and upload queues.
